Bevlin Logen

Computer Science student, Data Science · BINUS University, Jakarta

bevlinlogen@gmail.com fairycrush.github.io linkedin.com/in/bevlin-logen-92276a331 github.com/FairyCrush kaggle.com/bevlinlogen

Data science student who builds the whole path from scraping data to serving models through an API or the cloud, and checks every result against a fair baseline. Looking for a data science or machine learning internship.

EDUCATION

BINUS University · Bachelor of Computer Science, Data Science — Semester 5, ongoing

Relevant courses: Deep Learning, Text Mining, Research Methodology, Model Deployment, Big Data Infrastructure & Technology, Database Technology, Software Engineering, Data Structures.

EXPERIENCE

Freelance Front-end Developer · District health office, Central Sulawesi — Aug 2026

- Rebuilt a government health office's public website in Next.js 15, React 19 and Tailwind v4: **17** page routes reading from one typed content layer, so the client's database can be connected without changing any component.

PROJECTS

Vanscroft's ScanL · data analysis platform, built with a teammate — Jun 2026 – present

- Built the analysis engine, benchmarks and security layer of a Next.js + FastAPI app with **21 of 27** analysis modules active (pandas, scikit-learn, statsmodels, PyTorch).
- Rebuilt its AutoML around nested cross-validation and same-fold dummy baselines after a benchmark caught the old pipeline reporting **0.948** accuracy on pure noise.
- New modules (market basket, survival, recommender, sentiment) ship only after rejecting a known-null dataset and recovering a planted signal.

Eveline · 1.5B code model, LoRA fine-tune — Aug 2026

- Fine-tuned Qwen2.5-Coder-1.5B with LoRA on an 8 GB laptop GPU. On **214** held-out tasks it met **100%** of the checked house rules, against **85.5%** for the twice-as-large Qwen2.5-Coder-3B.
- Built the evaluation harness with leakage gates and a memorization check (**0 of 214** outputs copied training data); runs locally through Ollama.

TB Notification Benchmark · IEEE paper draft, team of 2 — Sep – Oct 2026

- Compared ridge, random forest, XGBoost and SVR across **120** countries with 10×5-fold CV, Holm-corrected tests and a protocol hash-locked with SHA-256 before the final run. The main hypothesis came out null, and the draft reports it that way.

Indonesian News Text Mining · course final — Sep 2026

- Scraped **5,000** detik.com articles. IndoBERT reached **95.68%** test accuracy (BiLSTM **92.37%**), LDA found **37** sub-topics, and MMR summaries were scored against ROUGE baselines.

Model Deployment and Cloud — Feb – May 2026

- Spaceship Titanic: **0.79869** accuracy on Kaggle's public leaderboard, then served through FastAPI /predict and a Streamlit form.
- Deployed a scikit-learn classifier to an AWS SageMaker endpoint, called from Streamlit on EC2 through an IAM role (AWS Learner Lab).

LSTM, Autoencoder and Conditional GAN · Deep Learning exam — Jun 2026

- PyTorch on a local RTX 5050: AAPL test RMSE **39%** lower than baseline, autoencoder SSIM **0.41** → **0.68**, conditional GAN FID **282.5** → **245.4**.

CERTIFICATION

AWS Academy Graduate – Machine Learning Foundations · Credly badge, knowledge checks 95% — May 2026

English Independent User, CEFR B2.2 · BINUS Beelingua verified certificate, ID 2026-B-8FQ9hpq0yRr20 — Jul 2026

SKILLS

Programming	Python, R, SQL, JavaScript, TypeScript, Java, C, C++
Data & ML	pandas, scikit-learn, XGBoost, LightGBM, statsmodels, SciPy, PyTorch, TensorFlow/Keras, Hugging Face Transformers, PEFT/LoRA, Optuna, gensim
Deployment	FastAPI, Streamlit, AWS (SageMaker, EC2, S3, IAM), Next.js, PostgreSQL, Git
Languages	Indonesian (native), English (CEFR B2.2)
Methods	nested cross-validation, leakage checks, multiple-testing correction, time-series forecasting, NLP and topic modelling
